

BA01 - Business Analysis Essentials - 3 days

Course Length: 3 Days / 21 PDUs

Course Description:

This is an introductory course designed to provide participants with a basic understanding of the benefits, functions and impact a Business Analyst has within an organization. The course discusses the business analysis process as it is applied throughout a project to include the pre-project activities that comprise enterprise analysis. Participants also learn how a business analyst supports the project throughout the solution development life cycle, from establishing the solution vision and scope in the analysis phase to validating that requirements have been met in the testing phase.

Included:

- Full Student Guide and Business Analysis Templates

Audience:

Designed for those individuals new to the Business Analyst role or those who supervise and/or work with business analysts.

Prerequisites:

This course is suitable for both novices and experienced people who need to have a clear and systematic approach to Business Analysis.

Workshop:

This course uses a client-supplied project interleaved throughout the course so that participants can apply the concepts and techniques associated with business analysis activities using a real-life example. The workshop deliverables include:

- RACI Matrix
- Context Diagram
- Business Process Model
- Business and Stakeholder Requirements
- Business Rule Matrix
- Use Case Diagram and Specification
- UI Mock-up
- Test Case

Learning Objectives:

After completing this course, participants will:

- Understand why and when to involve the business analysis function.
- Learn a working vocabulary to enable effective communication with those who perform that role.
- Plan, manage, analyze, document, and communicate requirements
- Conduct effective interviews, group workshops, and questionnaires
- Effectively capture and document business rules
- Develop Use Cases and UI Mock-ups
- Know how to ensure requirements are met
